Maintenance evidence

A320-family line checks — Narrow-body fleet work at a multi-stand operating base.

17 to 5 — Incomplete handover records across consecutive quarterly 60-task samples.

Three new colleagues — Mentored on task-card evidence and tool-control routine.

Summary

Line-maintenance technician supporting scheduled checks and defect rectification on narrow-body passenger aircraft. Coordinates handover between maintenance control, stores and certifying staff. Keeps parts traceability, tooling and incomplete tasks visible when work spans shifts or the assigned stand changes.

Experience

Senior Aircraft Maintenance Technician

Dune Quay Aircraft Services | 2021-10 – Present

- Coordinate the evening line team on planned checks and carryover defects. Review the next departure windows with maintenance control and flag work that needs more ground time, parts or a different approval before committing the team.
- Built a carryover record for each open task with its remaining step, tooling and confirming engineer. Incomplete handover records fell from 17 to 5 across consecutive quarterly 60-task samples.
- Check component traceability and task-card evidence before asking certifying staff to review completed work. Quarantine suspect documentation, log replacements with stores and confirm both records reflect the same part.
- Mentored three new colleagues by pairing them with experienced technicians for tool reconciliation and end-of-shift records. Reviewed recurrent documentation errors with the shift lead and organised a second observed check where needed.

Aircraft Maintenance Technician

Gharbi Bay Line Support | 2017-06 – 2021-09

- Supported turnaround inspection and defect follow-up under assigned authority. Logged repeat discrepancies using consistent equipment references so engineers could review the history across changes in shift and aircraft.
- Reconciled shared tooling across two stands and obtained return confirmation after unscheduled callouts. Escalated an incomplete kit reconciliation before the shift was closed.
- Updated the consumable stock handoff after identifying parts repeatedly requested outside service hours. Supplied evidence to stores and the planner for their decision on local stocking levels.

Education

Diploma in Aircraft Maintenance Technology

Seabright Technical Aviation College | 2017

Skills

Task-card evidence · Line maintenance · Technical log review · Tool control · Part traceability · Shift handover

Certifications

Recurrent Human Factors and Tool Control Training

Dune Quay Technical Training | 2025
