Safiya Khaled Nasser

Occupational Health and Safety Specialist

occupational-safety-specialist@example.test
Dammam, Saudi Arabia

Site safety evidence

Three production sites — Weekly inspections and action follow-up during upgrades.

24 to 7 overdue actions — Comparable eight-week periods after ownership and closure checks were introduced.

38 permit records — Sample reviewed before the maintenance shutdown.

Summary

Occupational health and safety specialist supporting active manufacturing and maintenance sites. Reviews work planning and contractor controls, investigates repeat event patterns and follows actions until the operating team has verified them. Presents clear gaps and owners to production leaders before planned outages.

Experience

Senior Occupational Health and Safety Specialist

Najm Reach Industrial Systems | 2021-05 – Present

- Coordinate inspections across three production sites. Discuss priorities with supervisors and distinguish issues needing immediate escalation from those that can be assigned at the weekly operating meeting.
- Introduced a separate step for field verification after an owner marks an action ready. Comparable eight-week reviews showed a fall from 24 to 7 overdue actions. Checked that the closure criteria and inspection scope stayed the same.
- Reviewed 38 permit records in advance of a planned shutdown. Found that equipment identifiers varied across planning and contractor records. Agreed a cross-reference and a recheck with the maintenance supervisor.
- Facilitated investigation reviews with workers and engineering leads. Identified assumptions that needed confirmation and checked the evidence behind proposed actions before giving leaders a closure recommendation.

Health and Safety Coordinator

Qamar Bay Fabrication | 2017-09 – 2021-04

- Supported contractor induction and confirmed attendance against issued access lists. Referred workers with incomplete prerequisites to their employer before release to the work area.
- Reviewed shift records after a series of near misses around shared access routes. Worked with yard supervisors to separate repeat observations from one-off reports and checked whether corrected routes remained in use.
- Tracked the site's training and inspection calendar. Flagged missing records ahead of weekly allocation so the team could name an owner or schedule a practical check.

Education

Bachelor of Science in Occupational Safety
Red Dune College of Applied Sciences | 2017

Skills

Contractor assurance · Permit review · Incident investigation · Corrective action verification · Outage coordination · Site inspections
