Marta Kowal

Software QA Analyst

software-qa-analyst@example.test · Kraków, Poland

Regression evidence

42 critical scenarios — Automated across sign-up, plan changes and renewal.

94 to 36 minutes — Median test time over three release cycles, running the same suite both sequentially and in parallel.

Summary

Software QA analyst for a subscription billing platform. Builds API and browser regression checks, reproduces transaction defects with synthetic accounts, and documents residual risks before the release owner signs off.

Experience

2022-05 – Present **Software QA Analyst**
Linden Vault Software

- Defined expected charges for new subscriptions, changes and refunds with the billing analyst. Automated 42 critical scenarios and kept exploratory coverage for exceptional account states.
- Reproduced a duplicate invoice after a failed renewal attempt. Recorded the transaction sequence, retested the fix and verified that existing invoices remained unchanged.
- Separated shared fixtures before parallelising tests. Compared median run times over three release cycles and kept retry cases in the release checklist.

2019-04 – 2022-04 **Software Tester**
Cedar Loop Applications

- Ran cross-browser tests for booking and account changes. Logged the environment and exact steps so developers could reproduce failures.
- Reviewed failed automated runs each morning and separated unstable selectors from reproducible product defects.

Education

2019 **BSc Information Technology**
Vistula Methods College

Skills

Playwright · API regression testing · Test data design · Defect triage · Release evidence
